

Mobile Apps & Web Applications for soil moisture measurement sensors and weather stations

A list of all devices (soil moisture and weather station)

SmartMeteo App for Android and iOs

This **specially developed app** offers many benefits to its users, such as alarms, an overview of the **most important data** from dry and wet bulb temperatures to relative air humidity, battery charge, wind speed and direction, leaf wetness, amount of precipitation and soil moisture.

Soil moisture

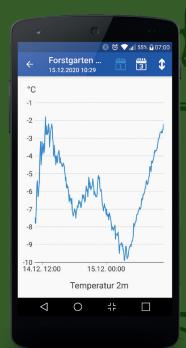

The details show **all current** sensor data for a device.

The data can also be viewed in chart form across **several different time intervals**. Alarms can be set on all sensors.

MeteoWeb (soil moisture measurement sensor)

The **soil moisture charts** can be viewed with a browser on a range of devices. The charts can be viewed **individually by station**, date and sensor.

MeteoWeb (weather station)

The **weather station charts** can be viewed with a browser on a range of devices. The charts can be viewed **individually by station, date and sensor**.
